

ASTARTER

Settlement infrastructure for the autonomous AI Agent economy.

FACT SHEET · REV. 2026.05.24

CHAIN	CARDANO
TOKEN	AA / 100M
FOUNDED	2021
BACKER	EMURGO
ALLIANCE	UXLINK

01 · THESIS

DeFi's next bottleneck isn't liquidity — it's settlement.

The defining trade of the 2026 cycle is who builds the settlement substrate for the first generation of economic actors that aren't human. Autonomous AI agents need deterministic financial primitives — the category emerging to deliver them is DeFAI.

02 · THE ASTARTER STACK

Four production components. One repositioned thesis.

- Launchpad / Launchpool — agent-native issuance and incentives
- DEX — on-chain liquidity and price discovery
- Money Market — collateralized lending and credit primitives
- Tech Service Platform — infrastructure tooling for builders

03 · THE UXLINK ALLIANCE · MAY 15, 2026

Execution layer + distribution layer in a single coordinated stack.

Astarter brings the financial primitives. UXLINK brings the active Web3 social-graph distribution surface. The first credible public attempt to pair execution and distribution in one partnership.

04 · AA TOKEN

Fixed supply 100,000,000. Four simultaneous roles across the stack.

- Unit of account for agent-to-agent settlement
- Payment medium for DePIN compute resources
- Governance instrument for protocol parameters
- Collateral primitive within the Money Market for agent credit

05 · WHAT TO WATCH

Three execution signals. Next two quarters.

- DeFAI execution layer functional beta with external production
- Multi-chain expansion beyond Cardano (EVM / Solana)
- Additional strategic alliances at UXLINK caliber
